Chanwu (Tyler) Oh

Backend developer who builds and runs services end to end, from Go code to AWS infrastructure.
Builds with AI agents through harness engineering: specs, context, and review gates.
Korean–English bilingual: reads docs and specs at the source and shares them with the team.

Projects

Jobcron · GitHub

Job-post briefing with AI fit scoring

Infra: AWS, Terraform, Docker, Cloudflare | BE: Go, PostgreSQL *May 2026 - Present*

Goal: One daily briefing of entry-level posts from Korean job boards, each with an **explained fit score**

Infra: **Invite-only alpha** on **EC2 and private RDS (PostgreSQL) via Terraform**; releases gated on an encrypted backup restore; built via harness engineering with multiple AI agents

AI Fit Scoring under Daily Spending Limits

Problem: AI scoring needed each user's own LLM API key, and every post had to be scored fast and cheaply

Analysis: Chose an external question-answering model (TypeSafe Jev) for speed and cost: a paid probe on 30 synthetic posts measured a **median 0.54 s and about USD 0.00013 per post**

Solution: The server asks it fixed yes/no and scored questions per post through an API, under **per-user and total daily USD limits**, with a **deterministic fallback**

Result: In production since Oct 30, 2026; users no longer need an API key of their own

Alpha-User Feedback to Shipped Releases

Problem: On Nov 3, 2026, friends using the alpha sent feedback and screenshots, alongside my own requests

Solution: An orchestrator agent specified the feedback as **28 items** with a plan; after my approval, worker and reviewer agents implemented and reviewed the work **card by card**

Release: Shipped via **application-only deploys** and a migration release after a **manual RDS snapshot** (Nov 6)

Result: Merged by Nov 8 and deployed: listing cards with salary, location, and stack; wanted/unwanted conditions with signed points; saved filters; admin tools; a redesign chosen with friends

Cha Physical Therapy

Web app for an NYC physical therapy clinic

Infra: AWS, Docker, Cloudflare | BE: Go, MySQL | FE: JS, CSS, HTML *Aug 2025 - Present*

Role: Freelance contract. **Sole developer who designed, built, deployed, and operates the service**

Booking: Live since Nov 7, 2026, from the clinic's **WebPT schedule imported every five minutes**; stale data falls back to a request form

Outage: Traced a 2h 54m outage to the **gp3 volume's 125 MiB/s ceiling**, restored it with no customer data loss, then added alarms, query time limits, and indexes (postmortem)

Publish: A clinic staffer authored and merged **15 of his own PRs** through a CI gate (Oct 13 – Nov 10, 2026)

Alix Chaput Architecture

Portfolio site for a French architect

Deploy: GitHub Pages | FE: JS, CSS, HTML

May 2025 - Jul 2025

Goal: A portfolio that holds up on **desktop, tablet, and mobile**

Solution: Hand-built a **responsive layout with CSS breakpoints and JavaScript**; WebP images; GitHub Pages

Lesson: Hand-built UI taught me fundamentals and why declarative frameworks exist

Education

Samsung Software & AI Academy for Youth (SSAFY)

Seoul · 16th cohort

Coding track - Java major class

Jul 2026 - Present

- Ranked 1st in my non-major class and 2nd across the non-major cohort on subject and monthly exams; passed a technical interview to move up to the Java major class
- Vice class president of the Java major class
- AI Challenge (Kaggle Korean VQA, 217 teams, team of 4): raised the team's score from 0.956 to 0.974 (1st in my class) with logit scoring, debiasing, LoRA, and ensembling

Self-study

2025 - 2026

- Switched from a US law-school path to software. Memorization (105,000-word Anki decks) hit its limits, so I moved to building services and hand-coding tools like Git and Claude Code from scratch (hand-coded).

Courses Web Development w/ Google's Go · freeCodeCamp JavaScript · freeCodeCamp Web Design

Books Head First Go · Head First Java · This Is Coding Test with Python

Hanyang University

Seoul · 2017 - 2025

B.A. in International Studies

GPA 3.91 / 4.5 (cum laude)

Skills

Languages: **Go** **Java** **Python** **JS**

Database: **MySQL** **PostgreSQL** **MongoDB**

Infra: **AWS** **Docker** **Terraform** **Cloudflare**

Tools: **Git** **GitHub Actions** **Linux**

Open Source

freeCodeCamp *JS curriculum*

- PR #66981 (merged): corrected inaccurate content in the WeakSet lesson

Certifications

TOEFL iBT *119 / 120*

- C2 (native level)

LSAT *173 / 180 (top 1%)*

- Reading and logical reasoning test for US law schools

Military Service

2nd Operations Command *Daegu*

KR–EN interpreter *2018 - 2020*
